

## The Client: Hunt Companies

Hunt has a long history within real estate investment, infrastructure, and military housing markets. Founded in 1947, Hunt remains a private, family owned company. The organization is now proud to be the 3<sup>rd</sup> largest U.S. Apartment Property Manager, and the 4<sup>th</sup> largest Affordable Multifamily Property Management Company. With around 130 lines of business, the company's

scale and diversity create unique challenges from an information security perspective. Hunt builds its reputation on integrity, performance, and a focus on excellence in corporate governance. Its therefore no surprise that they were keen to engage with a cyber security partner, such as ZeroDayLab.

## The Assignment: Baseline of Controls and a Roadmap for Improvement

Hunt needed a way to establish a baseline of information security controls that were currently in place at a corporate level. This would then be used as a benchmark for the entire organization. Putting controls in place at corporate level would enable the organization to drive a consistent information security posture from the top down, as well as ensuring ownership of information security at a senior level.

Once the baseline corporate controls were in place, Hunt would work with ZeroDayLab to develop a roadmap for further strengthening of the information security posture and trickle down across the company, to better secure each individual line of business.

## The Service: Broad Security Review

ZeroDayLab performed a Broad Security Review of the client's external and internal network infrastructure, public facing web applications, mobile applications, corporate wireless networks, and physical security.

This strategic and broad approach is popular with clients, as it enables them to effectively see what an attacker would see, simulate a real-life attack, rather than a one-off discreet test.

ZeroDayLab also carried out spear phishing campaigns and an OSINT gathering exercise to test the organization's exposure to risk and resilience to cyber attack.

The Broad Security Review allowed ZeroDayLab to compile a comprehensive report spanning several disciplines, which identified not only client weaknesses, but also areas of strength. This in turn meant the client was able to build a targeted and actionable roadmap, resulting in exponential strengthening of the client's overall information security posture.

## The Result: Client Testimonial

*"It has been an absolute pleasure working with ZeroDayLab. As an organization Hunt prides itself on excellence in corporate governance, so it has been refreshing to find another company, ZeroDayLab, who share our values and commitment to excellence in this area.*

*By engaging with ZeroDayLab we are in a much better position, where we now have a deeper and richer understanding of risk in our business. Not only this, we also now have the strategies in place to reduce these risks at pace.*

*The service and quality we received, from first engagement to delivery of the broad security review reports (and beyond) has been excellent.*

*I would happily recommend ZeroDayLab as a strategic cyber security partner, and I'm looking forward to continuing our relationship for years to come"*
