

ZeroDayResponse

Cyber Incident Prevention Training, Planning & Support

ZeroDayResponse is designed to raise your organisation's resilience in the event of a breach to minimise the impact of an attack. Pre-breach preparation is key. Assessing your capacity for managing an incident and setting the processes and training in place to manage them before they happen, are core to the ZeroDayLab approach for incident management. From Assessments to Runbook Creation to Training and Intelligence, preparing for the attack before its strikes protects business continuity and reduces the level of fines that could be incurred.

*Only 1/10 organisations have a cyber security incident management plan in place.**

*46% of all UK businesses identified at least one breach or attack in the last 12 months.**

Assess

How ready is your organisation for an attack? Get attack-ready by assessing the process and response gaps in your business - before an attack happens.

Ideally assessments should take place on an annual basis to accommodate for team and business structure changes. These include:

- Annual Incident Response Assessments
- Digital Forensics Readiness
- Cyber Threat Assessments

Prepare

Reduce the impact of an attack through training and response planning. Identify attack scenarios and define processes for response, tailored to your organisational needs.

Train team members from across departments, from Security and IT to the Board & Communications, to work in a cohesive unit to help you protect your customers and financial and reputational position.

- Runbook Creation & Training
- Incident Management Training
- Incident Response Scenario Training

Respond

The ZeroDayResponse annual service provides not only pre-breach preparation and training but specific incident support services designed to work alongside your team to help you get back to business as usual with as little impact as possible. Our post-breach services help identify breaches and provide breach response support and forensic evidence for investigations.

- Remote Access Investigations & Capturing Evidence for Forensics
- Digital Forensics Investigations
- Incident Management Guidance
- Post-Incident Reviews
- On-going Training

ZeroDayResponse

For on-going resilience, annual plans help businesses ensure that their incident planning and preparation stays current with changes in business strategy, departments and teams; coupled with the peace-of-mind that they have back-up on call to triage potential incidents to identify the real risk levels to their business and providing additional breach response assistance in the event of an attack.

	PRE-BREACH	POST-BREACH
GOLD	Administration of contracts & registration of key contacts plus Pre-Breach Annual Assessments <ul style="list-style-type: none"> • Digital Forensics Readiness • Incident Response Assessment 	Triage calls: 4 per year Inclusive breach response assistance days: 2 per year
PLATINUM	Administration of contracts & registration of key contacts plus: Pre-Breach Annual Assessments <ul style="list-style-type: none"> • Digital Forensics Readiness • Incident Response Assessment • Multi-departmental Incident Response Training • Cyber Threat Assessment 	Triage calls: 6 per year Inclusive breach response assistance days: 3 per year

Should additional breach response assistance days be required, these are set at preferential rates depending on which annual plan is chosen.
