

## 360° Information Security Assessment

A comprehensive deep dive analysis of over 900 security controls across 19 domains culminating in a report that delivers a detailed understanding of risk levels across security disciplines including Access Control, Human Resources, Physical Security, Asset Management.

The 360° Assessment helps organisations identify an accurate security baseline and determine a strategy for reducing risk through prioritised recommendations and lowering the cost of remediation.

The assessment will reveal your vulnerability to common cyber security threats and provide an overall risk surface analysis for your business.

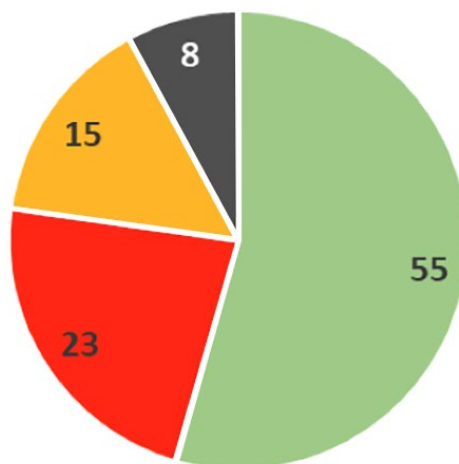

If you're looking to benchmark your security status, develop your security program, align to

best practice (NIST) or get security certifications such as ISO 27001, the 360° Information Security Assessment provides the basis for understanding the steps required to achieve your goals.

By interviewing your key people, reviewing documentation, and observing business processes our experienced consultants build up a detailed picture of the security controls present across your organisation. Following expert analysis of the findings, a report is drafted detailing your risk levels, identifying missing controls and providing expert commentary and analysis for improvements within each of the domains.

Post report, Stakeholders will be invited to join your consultant for a presentation highlighting key findings and to discuss recommendations on how to take those next steps.

### Detailed assessment of controls for common threats like Ransomware:

■ Control Present ■ Missing Control ■ Partial Control ■ N/A

Maximum Risk Score	590	Ransomware Vulnerability Level - Risk Level
Calculated Risk Score	271	46% - Moderate

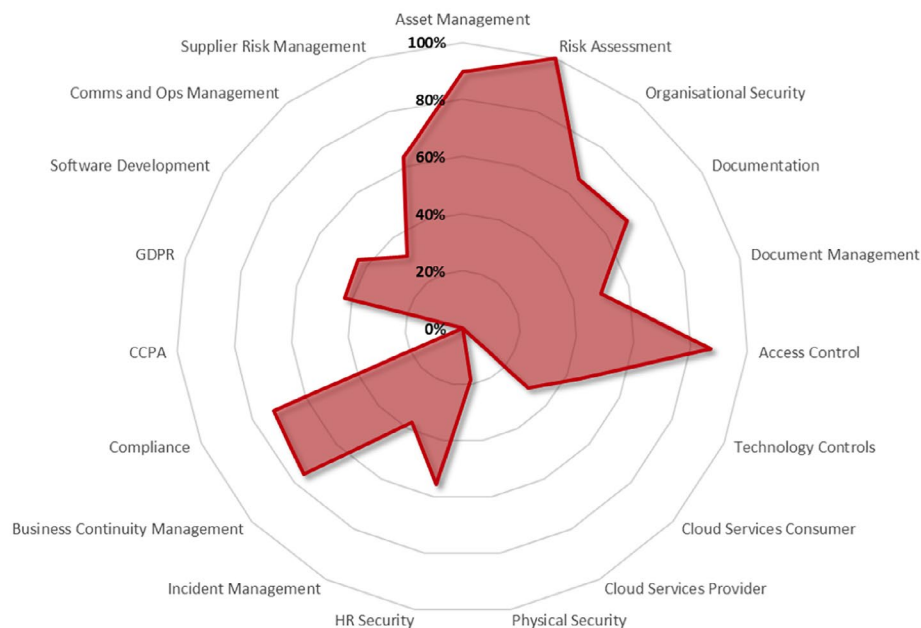

## Holistic approach covering 19 security domains:

- Asset Management
- Risk Assessment
- Organisational Security
- Documentation
- Document Management
- Access Control
- Technology Controls
- Cloud Services Consumer
- Compliance
- Physical Security
- HR Security
- Incident Management
- Business Continuity Management
- CCPA
- GDPR
- Software Development
- Comms and Ops Management
- Cloud Services Provider
- Supplier Risk Management

**“If you think compliance is expensive, try non-compliance.”**

Former Deputy Attorney General, Paul McNulty
